

Note for the INVIGILATOR

Life Sciences teachers are to go through this with the invigilator(s) in the 45 minutes prior to the examination.

The invigilator(s) will need to assess and record the following on the grids provided.

- **Following instructions:**
The four test tubes must be clearly labelled 1, 2, 3 and 4.
- **Procedural skills:**
The level of solutions in each of the test tubes should **NOT** be the same.
(Tube 1: 20 ml; Tube 2: 30 ml; Tube 3: 25 ml and Tube 4: 21 ml)
- **Manipulative skills:**
All test tubes are either blue or blue/green before the addition of the yeast solution.

The invigilator(s) must use the grids provided with the Instructions to Teachers and Laboratory Technicians to record the manipulation marks. The invigilator(s) must **circle either the 0 or the 1 in EACH case and total the mark out of 3.**

E.g.

CRITERIA		
Following instructions	0	1
Procedural skills	0	1
Manipulative	0	1
TOTAL		(3)

When the candidates hand back the examination scripts at the end of the PAT, the invigilator(s) MUST transfer these 3 marks onto the front cover of the script in red pen. The mark sheets MUST also be placed in an envelope and returned along with the marked scripts.
