

**Note for the INVIGILATOR**

**Life Sciences teachers are to go through this with the invigilator(s) in the 45 minutes prior to the examination.**

The invigilator(s) will need to assess and record the following on the grids provided.

- **Following instructions:**  
The four test tubes must be clearly labelled 1, 2, 3 and 4.
- **Procedural skills:**  
The 5 ml syringe has Solution B (dark yellow-brown) liquid drawn up in it and is placed next to beaker containing Solution A.
- **Manipulative skills:**  
Exactly 1 ml of Solution B is drawn up in the 5 ml syringe. The Life Science teacher must show the invigilator how this is done correctly, ahead of them recording the manipulative skills mark for each learner.

The invigilator(s) must use the grids provided with the Instructions to Teachers and Laboratory Technicians to record the manipulation marks. The invigilator(s) must **circle either the 0 or the 1 in EACH case and total the mark out of 3.**

E.g.

<b>CRITERIA</b>		
Following instructions	0	1
Procedural skills	0	1
Manipulative	0	1
<b>TOTAL</b>		<b>(3)</b>

**When the candidates hand back the examination scripts at the end of the examination period, the invigilator(s) MUST transfer these 3 marks onto the front cover of the script in black or blue pen. The mark sheets MUST also be placed in an envelope and returned along with the scripts.**
